

Google map marker label text color change

Asked 3 years, 4 months ago Active 1 year, 1 month ago Viewed 32k times

I am trying to change the Google map marker label color to white, while hover the event. How can i change the label color.

14

My code is

```
function hover(id) {  
  
    var icon2 = "<?php echo base_url(). 'bootstrap/images/tooltip_solid.png';?>";  
    for ( var i = 0; i< markers.length; i++) {  
        if (parseInt(id) == parseInt(markers[i].id)) {  
            markers[i].setIcon(icon2);  
            markers[i].setZIndex(999999999999999);  
  
            break;  
        }  
    }  
}
```

Markers identify locations on the map. By default, they use a standard icon, though you can set a custom icon. Markers are designed to be interactive and are often used within event listeners to bring up info windows. [View tag](#)

Simplest way is to create mouseover/mouseout event handlers for each

38

```
// creates a marker with a closure for the event functions.  
function createMarker(latlng, text, label) {  
    var marker = new google.maps.Marker({  
        position: latlng,  
        map: map,  
        label: {text: label, color: "white"}  
    });  
    google.maps.event.addListener(marker, "mouseover", function(evt) {  
        var label = this.getLabel();  
        label.color="black";  
        this.setLabel(label);  
    });  
    google.maps.event.addListener(marker, "mouseout", function(evt) {  
        var label = this.getLabel();  
        label.color="white";  
        this.setLabel(label);  
    });  
    return marker;  
}
```
